

If you still have questions after reviewing these instructions, please feel free to call us at (616) 531-9367. **NOTE: Template is attached to the Glass Crate.**

Step 1: Choose where you would like to install your VuEase®. Measure the area making sure the glass is smaller than the space on your wall.

Step 2: Insert each of the mounting screws a few turns into the VuEase® backer using the angled pre-drilled holes. Make sure they point at a downward angle. (When screwed into the wall the angle will give extra support.)

Step 3: Align the center of the Template to the center of your mounting area. Use a level to make sure it is straight.

Step 4: Hold the backer tightly to the wall with one hand; with the other hand use a driver, and turn each screw into the wall. (It is NOT necessary to mount into a stud or have anchors in the wall)

Step 5: Straddle the template over the first backer.

Step 6: Position and install the second backer using the template. Repeat Step 4.

Step 7: Position and install the third backer using the template. Repeat Step 4.

Step 8: Remove the Template

Step 8: The clips on the bottom are ready as is. Push the top clips up (A). Seat the glass into the bottom clips centering the glass side to side. Tilt the glass into position (B). Slide the top clips down (C) capturing the top edge of the glass. Use supplied ½" painted screw to secure the top clips (D).

Step 9: Slide the provided insert into the top of your now fully assembled unit.
